Locker Leftovers
A Guide to a Responsible Year-End Locker Clean Out

Created by the East Bay Depot for Creative Reuse, with support from StopWaste.Org
Each spring middle and high school students clean out their lockers in preparation for summer break. In their haste to leave, tons of material that could be diverted ends up in the landfill. Many teachers and school administrators find this “trash fest” appalling but lack the knowledge to do anything about it. With planning you can implement a responsible locker clean out where items are collected for reuse and recycling. Only a small amount needs to be sent to the landfill. You need a plan supported by the school administration and custodial staff, and someone willing to lead the effort. Locker Leftovers provides an excellent opportunity for students and staff to participate in waste reduction. It offers a unique opportunity to involve students in service learning. As students organize the event, promote it, weigh and record diversion, and analyze the results they are applying academic skills to a tangible outcome.

The Basics

Three things are necessary to launch a Locker Leftover event at your school: an existing recycling system, a supportive administration, and you — an energetic, committed advocate for reducing waste. If you meet these criteria you can do it. This guide provides information on how to implement a successful and responsible locker clean-out.

What You Can Expect from this Guide

In 2011, with funding from StopWaste.Org in Oakland, California, The East Bay Depot for Creative Reuse (The Depot) implemented a Locker Leftovers program in three Alameda County public schools.¹ The results were impressive with over a ton of material being diverted at each school. Each event was unique and all three were successful.

The Depot, supported by StopWaste.Org, created this guide to enable any school to stage a responsible year-end locker clean out. The guide offers a step-by-step outline of how to implement Locker Leftovers based on the situation at your school. It provides tips for engaging the administration and custodial staff, and securing volunteers, to ensure that your locker clean-out is successful.

¹Will C Wood Middle School, Alameda, California; Berkeley High School, Berkeley, California; Creekside Middle School, Castro Valley, California
How to Convince Your Principal, Custodian and Teachers to stage Locker Leftovers

If you need encouragement, either personally or to convince your school to take on Locker Leftovers, success stories abound. Will C. Wood Middle School in the small city of Alameda, California, has incorporated a year-end locker clean out as part of its service learning effort for the past two years. The project is headed by a committed teacher who involves her sixth grade science classes, and the student environmental club, in every aspect of the project. Last year Wood, a school with close to 600 students, diverted 3,037 pounds of material.

Berkeley High School (BHS), a school with a student population the size of a small town, also implants a successful locker clean out each year. Last year BHS diverted over 5,000 pounds of notebooks, binders, clothing, and electronics. The environmental science teacher worked with her environmental club juniors and seniors to physically remove the contents from students’ lockers the day after school ended. While the teacher and students had the blessing of the school administration, they were offered no assistance from the custodian. Students were motivated to reduce their carbon footprint (and perhaps by the pizza party afterwards!).

At Creekside Middle School, in Castro Valley, California, a successful Locker Leftovers was the result of a committed and active custodian. A waste-conscious teacher began the process and the custodian, who had been recycling at the school, organized and set up a collection system that allowed the school to responsibly clean out almost 800 lockers in a one-hour period on two consecutive days.

In all three of these schools, notebooks and binders were saved for use the following year, closing the loop of discarding to reusing.

If the environmental impact of the event is not enough to convince your administration, or the custodian, the following benefits can be persuasive. An organized Locker Leftovers event:

- Save custodial time in cleaning up after student locker clean out
- Can save on garbage disposal costs because it is generally less costly to recycle than to landfill material
- Engages students in socially conscious activity
- Builds spirit in the school community

A word of caution: make sure you have enough support to organize and implement the event. It will be extremely challenging to do this yourself, even if you have a motivated and committed group of students. Either the school administration, or the custodian (and hopefully both), need to be behind a Locker Leftovers event.
Models for Locker Leftovers

Based on your school’s capacity and existing waste-reduction infrastructure, you can select a Locker Leftovers model to meet your needs. In 2011 The Depot worked with three schools of varying size and readiness for Locker Leftovers. Each one completed a successful event. A description of three possible models follows, and what each requires. At the end of this guide is a chart outlining a course of action for each model. Read on to decide where your school fits!

Model One: Crème de la Crème

You have an administration and custodian committed to waste reduction. Your school has an existing recycling system in place, and it is working well. You have a “green team,” or group of leadership students who are motivated to become involved. You have several teachers behind the idea of Locker Leftovers and the blessing of the principal to spend time organizing the project. What more do you need? You are half-way there!

You Need To:

- Decide on a date, or dates, coinciding with when students are scheduled to clean out their lockers
- Determine collection bin needs and how to secure the bins
- Work with custodian to map out the collection that maximizes clusters of lockers
- Figure out how you will weigh and document your diversion
- Educate teachers and the student body about why, when, where and how
- Determine where the collected reusables will end up
Model Two: On Your Way!

Your school has a fully functioning recycling system. You have at least two of the following: support of your administration, enthusiastic support of the custodial staff, motivated and active student environmental group, a majority of your teachers supportive.

You Need To:

Developing a Locker Leftover plan that garners the support of any of the above who need convincing. If your custodian is not enthusiastic, convince him that it will be less work to secure and set out Locker Leftovers bins than it will be to clean up the mess made by a traditional locker clean-out. If you cannot get the custodian behind you, solicit permission from the Principal to work around the custodian. Locker Leftovers is generally cheaper than a traditional locker clean-out because extra recycling bins are less costly than additional trash bins. Once you have the support you need, follow the steps of the Crème de la Crème model.

Model Three: Almost There

This model is for those determined to mitigate the year-end trashfest, but aware that you might not have enough support, or infrastructure, to pull off a full-fledged Locker Leftovers event. If you simply cannot convince your principal and/or custodian to stage Locker Leftovers, you will need to limit your effort to recycling. If you have an existing school recycling system you should be able to add recycling to your locker clean-out. This is a positive step, as recycling is where the bulk of the diversion takes place in a Locker Leftover event. Your goal is to implement a successful recycling locker clean out. With diversion figures in tow you can work towards adding reuse the following year.

You Need To:

- Set a date that coincides with student locker clean-out
- Organize a schedule and task list
- Determine who will help (you will need at least one person for each recycling station)
- Figure out how to weigh and record the amount of recycling you collect
- Enlist the help of your students in educating the school on the why, when, and how they will participate
- Document your impressive results and making sure your school administration is aware of them

| **Post Clean-Out** | * Thank all involved  
* Assemble diversion data and send to administration and other interested parties | * Thank all involved  
* Assemble diversion data and send to administration and other interested parties | |
Materials Needed

Collection Bins – one station for each 150 lockers, including the following:

- Recycling: two fifty-gallon bins
- Binders: one 44-gallon bin, or multiple smaller bins or boxes with tops removed
- Notebooks: two plastic recycling bins or large cardboard boxes with tops removed
- Pens, pencils: one plastic recycling bin or cardboard box
- Books: one plastic recycling bin or sturdy cardboard box
- Clothing: one 44-55 gallon bin
- Locker shelves, mirrors, calculators, etcetera: one plastic recycling bin or cardboard box

Signs – student-made, or computer-generated, one set for each station (laminate if possible):

- Recycling
- Notebooks
- Binders
- Clothing
- Books
- Pens, pencils
- Miscellaneous

Other Materials:

- Bathroom scale (one for each station if they are spread out)
- Hand truck (if you need to transport reusables and recyclables)
- Packing tape to attach signs to bins
- Diversion recording sheets (in appendix)
- Clipboards
- Pencils
Volunteers & Helpers

Implementing a **Locker Leftover** event requires people to be at the collection stations to ensure that students place their discards in the proper bins. Even if your **Locker Leftovers** collection involves actually cleaning out lockers yourself, as was done at Berkeley High School in Berkeley, California, you will need help. Assistance is also necessary to keep the mess to a minimum and to ensure that the discarded material is weighed and your diversion recorded. One of the most satisfying aspects of **Locker Leftovers** is seeing the impressive amount of material you have kept out of the landfill.

### How Many Helpers?

You will need at least one adult at each collection station. Each station can service about 150 lockers. You want to position your stations near a cluster of lockers. This may necessitate more than one station per 150 lockers if the lockers are spread out. While students can and should assist, you will need adult helpers. (The most important role students can play is weighing and recording the diversion. This provides an excellent opportunity for learning). Refer to the resource section of this guide for suggestions on where to find volunteer helpers.

If you are doing a locker-to-locker clean-out, instead of collection stations, and have a dedicated, mature student group, you can send them out in teams with collection bins on carts or hand trucks. You will need 2-3 adults waiting at a central collection location to help sort the material into recycling, reuse and landfill.

Finding people to help monitor the stations, or go locker-to-locker, can be challenging. Start your recruitment as early as February. Begin by determining if staff and teachers are able to help. Often, the teaching staff are too involved in their own clean out to be a reliable source of assistance.

School staff are a potential source of help, but often get pulled away to take care of some other year-end tasks.

While engaging teachers and staff makes **Locker Leftovers** an educational, team-building event for the school, it is risky to rely solely on them. When the time comes teachers and staff are often needed for other tasks. For this reason it is important to identify outside people to help with **Locker Leftovers**.
Outside Sources of Volunteers

You can approach environmental clubs at colleges and universities for help, but be aware that the students have often left for the summer by the time of your Locker Leftovers. Still, it makes sense to contact any local colleges to see if there are students still around who might be interested in assisting.

If your school has active parent participation, approach a parent group for assistance. Be aware, however, that parents are often either working, or busy with the end of their children’s school year. It may be difficult to find enough parents to commit to helping.

In addition to school staff and parents, below is a list of potential volunteers. Begin early to secure the needed assistance.

- Rotary clubs and service groups
- Fire Fighters
- Waste-reduction agencies and non-profits

Once you have your volunteers identified, keep in contact with them as you plan your event. It is crucial to remind them regularly of their commitment. You do not want to discover, on Locker Leftovers day, that your help has not shown up.

After the event make sure to thank your volunteers and let them know how much discarded material you diverted. The tonnage will be impressive. If your help involves students, and there is time, gather them together to celebrate with pizza, bagels or other treats.
### Task Checklist

<table>
<thead>
<tr>
<th>Task Description</th>
<th>Complete by... (event minus number of months)</th>

Yellow Jackets Go Green

Planning a Waste-Free Event at Berkeley High School

Berkeley High School generates tons of garbage, yet almost all of it could be recycled or composted. Did you know that increasing recycling at school by 5% can save as much carbon emissions as a school putting on solar panels? So, please have fun at your event AND make it zero waste!

Plan:
- Reduce paper waste by promoting your event online, in the Jacket or the morning announcements, instead of handing out or posting flyers. Go to the leadership office to get help or find out more.
- Use this checklist to help you plan. Try something, even if you can’t do all!

Set Up:
- Make sure there are accessible and clearly labeled bins for all types of waste (landfill, recycling and compost). You can find these bins around the school, and return them when your event is finished. Alternatively, you can find 3 trash bins and label them yourself. Or ask Mr. Villavicencio in Leadership Office for Clearstream Folding recycling containers. You can find and print signs here: www.greenschools.net/BUSDgrienstarschools
- Educate yourself and others participating in your event about proper waste sorting. Make an announcement during the event to remind people to “Think Before You Throw.”
**Buy Green:**

- Think ahead and purchase only what you need to avoid excess.
- Avoid plastics and single-serving containers such as individual chip bags, or condiment packets. Instead, buy in bulk and serve individually.

**Food:**

- Provide finger foods that don’t require utensils to minimize buying plastic disposable utensils. For example, providing cupcakes instead of cake does not require the use of a fork. Sandwiches don’t need a fork, but salads do.
- When possible, purchase locally grown and/or fresh food for your event.
- Food waste should be put into compost bins.

**Plates & Utensils:**

- For smaller groups, use reusable plates and utensils. Recruit a volunteer to bring these items from home and wash them when the event is over. If this is not feasible, purchase items that are compostable, recyclable, and/or contains recycled content. These items are available at most Berkeley grocery stores, including paper plates, paper cups, napkins, or certified compostable “plastic” cups. See the Buying Guide at [www.greenschools.net](http://www.greenschools.net) for specific brands and more ideas. Remind people that paper plates, cups, napkins, and “compostable” plastic cups should all be put in the compost bin.

**Beverages:**

- Instead of buying beverages in single serving cans and bottles, prepare pitchers and serve in paper, compostable, or reusable cups.
- Encourage attendees to bring their own reusable beverage containers, like water bottles - BYOB (Bring Your Own Bottle).
- Avoid juice boxes and juice packs like Capri Sun - these are not recyclable or compostable, only landfill. Buy beverages in containers that are recyclable like cans or bottles.

**Clean Up:**

- Take your properly sorted waste and dispose in proper bins in the cafeteria, since custodians will service the compost and recycling bins in the cafeteria.
- Instead of throwing away any leftover materials/food, save them for later or give them away to friends or people in need.

Thank you for your efforts in creating a more environmentally friendly event!
In the spaces below, quickly brainstorm a list of your most wasteful events on campus that happen every day, periodically and only once per year. Consider both student organized events and “regular” school events such as school lunch and sporting events.

<table>
<thead>
<tr>
<th>Daily</th>
<th>Weekly/monthly</th>
<th>Once per year</th>
</tr>
</thead>
<tbody>
<tr>
